MILITARY EXPERIENCE TRANSLATES TO PROJECT MANAGEMENT SUCCESS.

The project management profession is an ideal career for military veterans transitioning into the civilian workforce. Why? Because your skills are directly transferable to the project management profession. Think about the type of successes you've had, like leading cross-functional teams to ensure accomplishment of mission objectives (strategic leadership skill), managing budgets and scheduling activities (technical skills), conflict mediation and performance appraisal (soft skills). These are all key proficiencies military veterans and project managers share.

You already have experience in “operationalizing” projects. Additionally, your strong “warrior ethos”—the belief that the mission is always first, to never accept defeat, and never quit—can lead to organizational success.

PROJECT MANAGEMENT: A FAST-GROWING PROFESSION.

PMI research identifies the **project management** profession as one of the fastest growing careers in the world, with abundant opportunity and good salaries for qualified talent. Project managers are highly valued in virtually all sectors.

Project Managers Are in Demand to Drive The Project Economy.

Today, organizations and people are centered around a portfolio of projects to deliver outcomes. We call this new way of working The Project Economy—in which people have the skills and capabilities they need to turn ideas into reality. This means having the right skills and mindset to move seamlessly from project to project in order to help their organizations deliver strategic outcomes. Our research suggests that military veterans have the personal and performance competencies to succeed as a certified project manager. With your experience and a PMI credential, you can distinguish yourself to potential employers and open doors to rewarding new opportunities.

Research Projects Tremendous Growth Through 2027.

Research conducted by the Anderson Economic Group (AEG) for PMI, shows that project management as a profession offers outstanding opportunity for jobs and career growth at substantial salary levels.* PMI research also indicates that the average annual private sector salary for project managers in the United States is US \$105,000.

- By 2027, employers will need nearly 88 million individuals working in project management-oriented roles.
- In the U.S., project management job openings are growing faster than jobs in the overall labor force. We expect employment in the profession from 2017–2027 to increase 8.5 percent, compared to 6.5 percent for all occupations.

What do military veterans with a career in project management say?

“Get the PMP certification as soon as possible and work to maintain the certification by attending/participating in local PMI functions to stay current... I [learned] from others in the private sector that certifications may provide advantage over education alone.”
